► *Our ACE concept*

TKF's brand ACE is a certified and guaranteed concept for passive FTTx networks. As a total concept ACE provides the broadband market with a new vision on building fibre optic networks. ACE does not only consist of products, but also guarantees compatibility between all the different components and offers complete, passive solutions.

The demand for broadband is expanding every day. Fibre optic networks are rolled out worldwide. Size and topology of networks vary per region. Therefore TKF innovates continuously to improve our flexible, cost-efficient and easy to install ACE solutions.

The ACE concept is mainly a success of people. People with knowledge and skills concentrated in the ACE team. Together with our customers we share technical knowledge and new developments at the ACE Academy.

The ACE team is ready to help our customers to stay ahead with continuous development, leading the way in ACE city via the fields of applications: POP, OSP and Subscriber.

► POP Solutions

Building a FTTx network starts at the drawing board where configuration, technology and planning are defined. One of the most challenging parts of the network is the POP (point of presence). This is the centre (heart) of the network where all connections are made and active equipment is installed and operated. It is essential to exclude all possible risks during installation and operation. TKF has gathered all its experience and know-how within the ACE concept, to cover the full range of options to achieve an optimal POP performance.

POPs need to be built close to the subscribers. Moreover they need to fit into this environment and meet the requirements of the subscribers on construction, size, shape, colour, noise and place. TKF has set up a flexible design that meets all demands. A street cabinet solution or a large POP building, they all fit within the ACE concept.

The ACE POP solution offers:

- Flexible design
- High and super high density ODF
- Optional SAODF (semi-automated ODF)
- Third operator solution
- Partial delivery or turnkey solution

► OSP Solutions

Civil work is the major cost driver (>70%) of the total cost of ownership (TCO), to build FTTx networks. The cost of civil work vary from country to country, sandy or rocky soil and paving: tiles, concrete or no paving at all, make a big difference in cost. Within the ACE concept TKF offers solutions for each OSP network to lower the cost per individual challenge.

Direct burial cable solution:

Within the ACE concept, TKF has developed a full range of products making the installation of a direct burial cable concept easy and cost saving. Heavy duty steel or kevlar protected cables are available together with all components, like closures and access chambers that fit in this application.

Modular cabling solution:

In order to meet the various demands (success based installations) it is often required to use a modular cabling system in FTTx networks. ACE offers a full modular cable solution including all accessories like closures, duct connectors, fibre blowing equipment and a special ODF, for easy installation of all tubes within the POP or street cabinet.

Aerial solution:

In case of existing aerial infrastructure (f.i. power lines), it can be cost saving to use this infrastructure to install a FTTx network. ACE offers a full range of ADSS cables suitable for this application.

TKF has experience with sewer paths and fibre through gas pipelines. To prevent expensive digging operations, TKF has looked at all the different trenching possibilities, like macro and nano trenching. All these cost saving solutions can be fully integrated within the ACE concept with warranty and certification.

► *Subscriber Solutions*

The main challenge when building a FTTx network is getting access to the subscriber. As we are operating within the public sector, possible challenges are:

- Availability of subscribers during office hours
- Wishes and demands of house and building owners
- Local regulations and cooperation of all subscribers in the chain:
 - Are we allowed to install on the outside of the building?
 - Can we install in hallways, cellars or elevator shafts?

All these solutions and installation options require tailor made products and systems. TKF has developed a total ACE subscriber solution for both single and multi dwelling units (SDU and MDU), that fit all these demands and still keep the cost low.

Special indoor and outdoor cables have been developed. And a full series of fibre splice and patch boxes are available in all required sizes and shapes, designed and tested for this challenging environment.

► Rack System ODF-PMF-PPF

The ACE rack system is designed for housing passive components for fibre distribution. The rack system offers space for optical distribution shelves, patch panel shelves, splitters and other 19" components.

Every height unit can be reached via the keen ACE patch-cord management system, which makes it possible to connect every position inside the rack system with only one cable length. The cable cams provide easy fixation and management of cables. The separation plates on the bend controllers separates the ring feeder patch-cords from the ODF patch cords.

The rack system is provided with cable protection brackets for feeder and distribution cables.

Parameter	Unit	ACE-Rack system
Dimension	Height	2200
	Width	1800
	Depth	400
Capacity		2 x 47 HU
HD fast connect capacity		4512 LC / 2256 SC
Colour		Powder coated RAL7035

Features and applications

- FTTH POP housing
- High density FTTH networks
- Suitable for 19" splice/patch shelves, patch panel shelves, splitters and other 19" components
- ACE patch-cord management system
- Bend radius protection throughout the frame
- Fully front accessibility
- Compact and light weight design
- Maximum flexibility and modularity
- Cable entry top and bottom

ART. NUMBER	ACE CODE	DESCRIPTION

561677	RS-WT-A1-NN0-01	ODF Right + PMF + PPF 2200 x 1800 x 400 mm (hxwx d)

N.B.: For customized design or complete solutions, please contact your TKF sales representative.

► HD Fastconnect Splice/Patch Shelf

Parameter	Unit	Splice/Patch shelf type L
Dimension	Height	44.4
	Width	510
	Depth	200 (excl. bend control guide)
Capacity		1 HU 4 HD Fastconnect trays 96 LC or 48 SC positions
Colour		Frame: black Overlength storage module: green Patch tray: Natural white Pigtails: IEC 60304 / VDE 0888-3

Features and applications

- Compact and light weight design
- 1HU - 19" - 96 fibers
- Stripped pigtails and premounted adapters reduce installation time
- Two-step sliding mechanism for easy accessibility
- High density FTTH networks
- Suitable for mounting in the ACE rack s ystem
- Extension kit transforms two 1HU shelves to one 2HU shelf
- Feeder cable protection

The HD fastconnect splice/patch shelf is a versatile 1 HU shelf. The shelf is used for splicing and patching fibres of an optical cable in a rack environment. The shelf accommodates up to 4 ACE HD Fastconnect trays for a total capacity of 96 LC positions. Tubes of the feeder cable enter the shelf at the back. The fibres are terminated to pigtails (SC or LC) and connected onto the adapters. Stripped pigtails (individual strip lengths) and adapters can be mounted in the shelf. Four front patch trays are mounted inside a slide rail. Orientation of adapters is to the right side. Patch-cords are guided to the patch-cord management frame at the right hand side of the tray. For easy accessibility during patching, access to the individual trays is achieved by a two-step sliding mechanism. Unambiguous coding on the trays reduces the risk of mistakes during patching to a minimum.

ART. NUMBER	ACE CODE	DESCRIPTION
485008	SH-L1-BLS-VL7	HD Fastconnect Splice/patch shelf - 19" right prefab 96x LC/APC 8°

485020	SH-L1-EXT-01	Extension kit shelf type L connecting 2 shelves 1HU incl. protection cover

N.B.: Above part numbers refer to crimp splice protector holders.

For other configurations please contact your TKF sales representative.

► Optical Distribution Frame

The ACE optical distribution frame is an ETSI all purpose metal rack designed to reach the maximum modularity and flexibility to allow easy on-site assembly. Optical cables and patchcords are organized, stored and mechanically protected in the side extensions of the rack. Shelves can be back-mounted in the base frame of the rack.

The modular design suits any specific application. The rack configuration is composed of modular units: a central frame and side extensions. The rack permits a structured division and distribution of the cable elements. It features a cable termination system with provision for the strength member attachment, grounding of metal elements, adequate bend control on all fibres, routing and complete flexibility in patching from one side to the other, without the need to pre-calculate the individual cable length. Various mounting options: stand alone, side-to-side, back-to-back.

Parameter	Unit	ACE-ODF-1	ACE-ODF-2
Dimension	Height	2000	2200
	Width	see ordering info	
	Depth	300	
Colour	Powder coated RAL7035		
Capacity		72 MU	80 MU

Features and applications

- Exchange, primary distribution points, customer's premises
- Central offices, telecommunication equipment rooms
- Weather-protected locations, such as building basements
- Bend radius protection throughout the frame
- Fully front accessibility
- Maximum flexibility and modularity
- ETSI Compliant
- Cable entry top and bottem

► Compact ODF

ACE Compact Optical Distribution Frame is developed to manage all types of fibre cables in restricted space.

Each door and panel can be removed and locked by a handle. Cable entrance and patchcord outlet are possible at the top and at the bottom of the rack.

Sub-rack can be drawn out easily with free access to splicing and patching areas. Modular concept allows basic rack to accommodate up to 5 modules for patching/splicing.

ACE Compact ODF capacity can vary from 120 fibers (two fibers per tray) up to 240 fibers (four fibers per tray) with single-circuits fibre management.

Features and applications

- ETSI standard
- Unbundling access networks
- Small area central office
- Compact multipurpose patch/splice rack and modules
- Modular concept, all panels removable
- Patch-cord management and extra-length storage

► *Pivoting Tray Drawer*

The ACE Pivoting Tray Drawer is suitable to splice and patch fibre optic cables using the most common connector types (SC & LC). It can easily integrate splitters, WDMs and any other passive devices. The drawer is a fixed 19" frame in which pivoting trays are mounted. In each tray splice cassettes, pigtails and connectors can be pre-assembled.

The unit can have the following configurations:

- patch and splice
- patch and patch

19" or ETSI mounting brackets for back mounting are provided. Removable front cover and pivoting tray allow easy patch-cord installation and re-accessibility. Angled patch panel reduces the risk of eye damage. Minimum bending radius 30 mm is guaranteed. The drawer is painted in light grey (powder coated) RAL 7035.

Features and applications

- Ultimate connectivity density
- Pivoting trays for easy installation and maintenance
- Full bend radius control
- Pre-loaded pigtails on request
- Inside and outside plant installation
- Future proof for high density applications

N.B.: Above part numbers refer to heat shrink splice protector holders, pigtail colour white.

Front mounting bracket available on request.

For other configurations please contact your TKF sales representative.

► Sliding Tray Drawer

ACE sliding tray drawer is used for splicing loose tube cables, and patching the pigtails to patch-cords or for patching only (patch-cords and assemblies).

The ACE sliding tray drawer is used instead of front patching, when full easy access at both sides of the connection is required.

Within the tray a patch can be made to every position with a perfect control of the patchcord overlength.

Accurate design and compact adapters allow to accommodate 12 terminations (24 SFF connectors) per tray.

Swing-removable adapter holders make it easy to access the connection at both sides. Kits to attach cables at the side or at the back of the shelf are available.

PLC splitters or other optical passive components can be integrated.

► Sliding Splicing Drawer

Please refer to ACE-STHD splice trays to configure your splice needs

The ACE Sliding Splicing Drawer is a product designed to splice cables to cables and cable to pigtails. The product can be used inside the ODF racks in combination with STD shelves to terminate pigtails.

The main distinguishing features of the product are the use of HD splice trays for splicing; the integration of passive components such as PLCs; the ability to terminate pigtails using optical Pigtail Kevlar Retainer and to facilitate the installation with pre-assembly tubes to guide the fibers within the sub-rack to reach the splice trays.

► Patch-cord Management Shelf

The ACE patch-cord management shelf is a mechanical shelf assembly which can be used either to store overlength of patch-cords or to route them from one lateral duct to the opposite one in a controlled way. Four half round drums are used to guide patch-cords entering from either the left or the right side.

Drums can be re-arranged in such a way to manage cords in a horizontal way. The shelf is available in different heights. Design allows easy access for incoming and outgoing fibers. Front cover protects the patch-cords when open frames are used.

Features and applications

- Within racks or outdoor cabinets
- 19" and ETSI mounting
- Entrances/exits both left and/or right sides
- Drums to secure bend radius protection of the patch-cords

► Ducts and Tubes

Ducts and tubes offer a protective path for fibre infrastructure. 3 Classifications can be distinguished: micro tubes with a diameter of $\leq \varnothing 5$ mm, mostly bundled in multi tube cables, mini tubes with a diameter of $\leq \varnothing 16$ mm, these are bundles in multi tube cables or utilized as single conduit, and ducts with a diameter of $> \varnothing 16$ mm.

Features and applications

- Ducts and tubes are tested in combination with TKF cables
- Ducts and tubes are an integrated part of the ACE solution
- Large scale experience in civil works and cable blowing
- ACE connectors designed and tested in combination with the ducts and tubes

TKF cable blowing test facility

Mini tube indoor LFH

Micro tube PE

N.B.: For detailed information about ducts and tubes please contact your TKF sales representative.

► Multi Tube Cables

Multi tube cables are an assembly of micro or mini tubes. The ACE multi tube cable portfolio covers a complete range of assemblies with a large variety of tube numbers and tube diameters, suitable for both indoor and outdoor applications.

Features and applications

- Future-oriented network
- Just-in-time investment
- Fibre replacement possible at any time
- Flexible engineering
- Reducing splicing and distribution points

MTC direct buried tubes

MTC direct install

MTC low fire hazard

MTC direct buried tubes

Ducted MTC direct buried tubes

MTC PE tubes

N.B.: For detailed information about Multi Tube Cables please contact your TKF sales representative.

► Connectors

ACE provides a complete program of high quality tube connectors: straight, end, reduction and gas-block. Connectors are available for direct install (DI) and direct burial (DB) applications.

5 mm - 20 mm

Features and applications

- ACE tube connectors are tested according international standard IEC 50411-2-8
- Deutsche Telecom (German Telecom) approved
- Transparent body allows verification of the position of the tube inside the connector for push-fit connectors
- Compact size
- Push-fit up to 20 mm
- Secure ring that is fixed after installation of the tube for push-fit connectors
- Re-installable
- Colour of the collar indicates the DB (blue) or DI (green) functionality for push-fit connectors

► Tube Management Closures

Tube closures are an excellent and cost effective solution to branch-off and connect duct and blown fibre tubes. The tube closures are suitable for different types and sizes of tubes and ducts.

The ACE 2-way and 4-way tube closures are divisible direct buried closures which can be used for:

- Transition of tube to tube (same diameter)
- Transition of tube to different diameter tube
- Transition of microtube to microtube (one-on-one proportion)
- Transition of several microtubes to tube
- Transition of several minitubes to modular cable

The closure is used for fibre network maintenance and fibre or tube blowing features.

The strain relief inlay parts are exchangeable, therefore it is possible to use one housing for several diameters and applications. A range of 25, 32, 40 and 50 mm are available for use with the closure housing.

Tube connectors are easy to install due to the length of the closure. The closure can be installed without any special tooling.

ART. NUMBER	ACE CODE	DESCRIPTION

530228	CLAC-RX-CL0332	Tube closure clamp 32 mm
530226	CLAC-RX-CL0350	Tube closure clamp 50 mm

The ACE MC type 5 branch-off closure is a twin shell re-openable that serves as mechanical protection when extending or branching off multi tube cables. The closure is applied at the position where the outer sheath of the multi tube cable DB is removed and tubes are extended or branched off with tube connectors.

The 4 ports (2 ports on both sides) can be used for different diameters:

- 50 mm max (smaller diameters are 46, 39 and 33 mm)
- 50 mm max (smaller diameters are 34, 30 and 17 mm)

The closure is sand-tight. A metal bracket inside the closure is used to fix cables with hose clips.

ART. NUMBER	ACE CODE	DESCRIPTION

530345	CL-5A-T-P	Tube management closure branch-off closure MC type 5 purple

N.B.: For other configurations please contact your TKF sales representative.

► Small Termination Closure

The ACE small termination closure is constructed to support butt or in-line low count splice applications in a direct buried environment and pole/wall mounted applications nearby the subscriber.

The closures' compact size and rugged exterior allow for installation in tight spaces without compromising functionality. With the included heatshrink splice protectors this closure is ready for splicing (or repairing).

Four corner entrance ports provide the installer the flexibility to quickly configure the closure as needed.

Features and applications

- Compact size
- Cost effective solution ideal for quick restoration of damaged/cut fibre service drops
- Quick to assemble, no tools required for assembly
- Flexible sealing technology supports a wide range of flat or round cable profiles
- Sealing and fixation adjusted for 6 mm cable
- Designed for direct buried, below grade, pole/wall mount or aerial applications
- Re-enterable and re-usable
- In-line and butt applications
- Max. capacity 12 splices
- Flat shape allows for mounting in small areas

Patchpanel

ACE small termination closure standard including:

- | | |

► *μODC Closure*

The highly versatile ACE μ ODC closure is specially designed for loose tube and soft-tube cables in the FTTx networks. Thanks to the unique features which comply the new market requirements:

- Compact dimensions (< 2 liters)
- Mechanical and waterproof protection (IP 68)
- Versatile and flexible usage (buried, aerial, facade installation) in outdoor environment

Depending on the configuration, the μ ODC can be used in different configurations: in-line, butt or tap-off with easy access or re-entry.

The closure allows cable loop configurations in combination with up to 18 drops cables. Uncut loose buffer tube storage space is available thanks to the hinged frame.

The fibre management system offers cable fixation, protection of the tube loops and positive routing for the fibres with a minimum bend radius of 30 mm throughout the whole system. Similar to the complete ACE closure family, the standard cassette ACE-STHD is used for splicing.

The cable entries can be sealed using the unique mechanical gaskets from ACE.

Optionally the closure can be provided with a pressure valve and a grounding point.

Features and applications

- G.652-G.657 fibre compatible (standard STHD cassette)
- Positive fibre management (secured min. bend radius)
- Latch closing system
- Easy installation - friendly use
- High reliability - IP68 and IK10

Dimension and capacity

► Compact Fibre Optical Closure

POP
OSP
Subscriber

The ACE compact fibre optical closure has mainly been developed for FTTH access networks. Thanks to its slim design the closure can be used for both underground and aerial applications. Suitable for splicing of standard optical cables or for blowing of micro-cables, the compact closure is the ideal solution for an access network. The flat rectangular shape guarantees installation in compact environment such as small hand-hole or cabinet. The space behind the frame can be used either as storage for uncut loose buffer tubes or as a patching point.

► Fibre Optical Closure

ACE fibre optic closure is an environmentally sealed single-ended optical closure for the fibre management system that provides the functions of splicing and passive component integration in the outside plants (IEC 529, IP 68). A wide range of configurations can be arranged by adding ACE-STHD modules and/or passive device sub-assemblies.

It has provision for all cable termination and sealing requirements. One or two oval entry ports for looped (uncut) cable and six, eight or eighteen round ports for drop cables entry/exit are provided in the base. Uncut loose buffer tube storage space is available between the two stacks. Depending on the installation conditions, suitable cable seals kits are available.

► Demarcation Optical Closure

The ACE demarcation and compact demarcation closure are environmentally sealed single-ended optical closures to manage the demarcation point from the operator network ends and the customer's on-premises wiring. These demarcation closures are the ideal solution for a flexible carrier demarcation point with dimensions and splice/connection capacities suitable to satisfy all requests.

Large splice capacity HD trays used together with compact and positive design allows that extra carriers/customers can be connected to the backbone side of the network without affecting other, already connected carriers/customers. These closures have the same features and benefits of standard ACE fibre optic closures (IEC 529, IP 68). Also the same sealing methods can be applied. Due to the possibility to integrate splitter assemblies in the HD splice trays, makes it possible to transform an demarcation closure into an distribution and demarcation point.

► Heatshrink Sealing Kits

ACE sealing kits consist of heat shrinkable tubing made from high performance crosslinked polyolefin coated internally with hot melt adhesive to give high mechanical and environmental protection. When heated with a standard gas torch, or similar heat source, the tubing shrinks to follow the shape of the outlets and cables to be protected. The hot melt adhesives or sealant flows to fill any cavities or surfaces to guarantee IP68 level of protection. Every kit contains all the components to prepare and terminate all type of cables with different constructions (see kit descriptions or contact our sales office for more information).

ART. NUMBER	ACE CODE	DESCRIPTION
568181	CL-FOC-HOS	Oval port seal heatshrink A&C closure for loose tubes cables
568180	CL-FOC-HRS	Round port seal heatshrink A&C closure for loose tubes cables
568182	CL-FOC-HRS-B	Round port seal heatshrink B closure (two port) for loose tubes cables

Additional to the standard sealing kits also pre-assembled closure kits for multi tube cables are available. Multi tube cables with 5/3,5 mm or 7/4 mm micro tubes are introduced in the closure and sealed. The micro tubes on the outside of the closure are protected with a flex tube for easy installation in an access chamber.

The water- and gastight pre-assembled closures are tested and delivered with a testing and quality report. This pre-assembled closure design is developed in close cooperation and interaction with our customers, which resulted in an easy and cost effective solution.

► Mechanical Sealing Kits

Each seal is re-accessible and allows easy and fast installation of any cable even when other cables are installed in the same port. Whatever the construction of the cable, all sealing kits allow to terminate either the aramid yarns or the strength member in order to provide a good resistance to accidental forces. Depending from the size of the cable, each sealing kit permits the entrance of one or more cables in the same port even in different sequences. The sealing (IEC529 and IP68) is guaranteed in all circumstances.

► Street Cabinets

The ACEcab consists of a fully assembled cabinet in a modular setup. The outer shell of the cabinet is made of reinforced polycarbonate, which is an extremely durable material. The inner construction is designed for an easy and fast installation for various applications. The modularity offers options to use plug and play splitters, patchfield with different adapters and single element or single circuit splicing.

The primary use of the ACEcab series is to form the last distribution and manipulation point in a fibre network of buried (multi tube) cables. High fibre count cables come in from the central office which are connected to the cables that run to the individual premises of a house or business. There are different cable entries available and sufficient space for clipping direct buried tubes to the backframe.

Features and applications

- Attractive modular design
- Swing frame technology for easy access
- Modular splice system for single circuit / single element
- Tube management / storage
- Plug and play splitter / splice splitter solutions
- Minimum installation time
- Secured fibre and cable routing
- Modular components in the entire housing (building blocks)
- IP54 protection

► Next Generation Box

The ACE next generation boxes are the new compact wall enclosures developed for the PON and P2P FTTH network architecture. The boxes are designed to operate in category C (controlled), category G (outdoor ground level) and category A (aerial) as characterized by IEC 61753-1, hence for indoor and outdoor applications like customer's premises, basement building, telecommunications equipment rooms, pole mountings, external wall sites etc. The protection level against water and dust is IP55. The boxes can accommodate uncut looped fibre cable and it is possible to terminate and seal different cable construction by a complete range of accessories. Versions with lock are available for improved security against unauthorized openings.

Features and applications

- Cable seal kits and accessories for easier installation
- Compatible with the most common cables types
- Cable seal kits and accessories for easier installation
- OSP Drop cable terminations for access networks
- Telecommunication enclosure for floor optical distribution
- Customized compact environmental protection

Description		
Parameters	Unit	Size
Height	mm	330
Width	mm	216
Depth	mm	125

► Splice

The splice version of the wall box is capable of accommodating the fibers of an uncut looped optical fibre cable. It is possible to terminate different cable types and constructions

Max port entries (in+out)	Splice capacity		
	HD3-24	HD6	HD4
2	144	96	96

► Light Splice

The light splice version of the box accommodates the ACE fibre management system when a cost effective spliced fibre connectivity solution is requested.

Max port entries (in+out)	Splice capacity		
	HD3-24	HD6	HD4
2	144	144	96

566511	TB-PSC-H12-S2-12-12	Patch and splice card preloaded with 12 SC/APC pigtailed and adapters

N.B.: Above patch and splice card part numbers refer to heat shrink splice protector holders, crimp splice protector holders available on request.

Patch only cards or other configurations available on request.

For other configurations please contact your TKF sales representative

► Sealing kits

Multiple wraparound cable seal kits are available using different mechanisms. Standard cable glands PG16, 21 and 29 can be installed on box (two cable entrance for box). Configuration for main cable entry (4x20 mm) and looped cables. Drop cables can be managed with push through ports (12x10 mm or 24x6 mm). Wraparound pigtail seal can be used for easy re-entry without disturbing existing circuits. Strength member of reinforced cables are fixed inside the box with the appropriate and dedicated kits.

The sealing kits can be installed on all NGB boxes. The box can also be customized with standard cable glands available within the ACE portfolio

► ACE Customer Outlet

New outlets for fibre optic cabling for residential and commercial buildings. The ACE customer outlets are a complete line offering modern solutions suitable for several configuration such as multi port, splicing and hybrid. The low profile design and horizontal vertical orientation of the optical outlets offer a very clean visual appearance while protecting the cable connection with respect of minimum bend radius of the fibre.

- max. 4 fibers (566007)
- max. 8 fibers (566008)
- max. 16 fibers (566009)

These customer outlets are only for indoor use and can be mounted on a wall.

► ACE Splice Tray High Density

The high density splicing module (ACE-STHD) is an essential part of the ACE product range. These modules allow increased fibre capacity in any of the ACE shelves, closures and boxes, ensuring full bend radius control and total fibre management.

The module consists of a number of trays for storing and protecting splices, and a routing plate which guides the fibers in and out of the tray. The concept uses a base plate allowing more trays in the footprint, increasing fibre capacity. High quality, total modularity and ease of installation are the key factors of the ACE-STHD splice system.

► PLC Splitters single mode

Planar Lightwave Circuit (PLC) is a manufacturing process for splitters. It concerns a waveguide array that is applied to a silica chip by using a photolithographic masking process. PLC splitters are available in several types. To simplify the selection a general division can be distinguished: hard case splitters for distribution of fibre cords and small case splitters for distribution of (buffered) fibers. Both types are available in a 1 to n split ratio and an 2 to n split ratio. All splitters perform excellent in indoor and outside plant conditions.

► Small Case Splitters

Insertion loss	dB	≤ 4.2	≤ 7.6	≤ 10.8	≤ 14.0	≤ 17.5	≤ 21.0
Loss uniformity	dB	≤ 0.9	≤ 1.0	≤ 1.2	≤ 1.5	≤ 1.8	≤ 2.2
PDL – Polarization dependent loss	dB	≤ 0.3	≤ 0.3	≤ 0.3	≤ 0.3	≤ 0.35	≤ 0.4
Return loss	dB	≥ 55					
Directivity	dB	≥ 55					
Temperature stability -40 ~ +85 °C	dB	≤ 0.5					
Wavelength dependent loss	dB	≤ 0.5	≤ 0.5	≤ 0.5	≤ 0.8	≤ 0.8	≤ 1.0
Package dimension (l x w x h)	mm	60 x 7 x 4	60 x 7 x 4	60 x 7 x 4	60 x 12 x 4	100 x 20 x 6	

Note: Without connector type. In case of with connector, IL will be increased about 0.25 dB for each port.

N.B.: For detailed information about the splitters please contact your TKF sales representative.

► Hard Case Splitters

The hard case splitters can be mounted in a splitter shelf. Up to 23 splitters can be housed in a 3HU splitter shelf. The splitter shelf can be mounted in a 19" frame.

For guidance of the 2.0 mm cords it is strongly recommended to add a 1HU patch-cord management panel on top and under the splitter shelf.

Specification

Ratio	Unit	1 x 2	1 x 4	1 x 8	1 x 16	1 x 32	1 x 64
Operating wavelength	nm	1260 - 1650					
Insertion loss	dB	≤ 3.8	≤ 7.1	≤ 10.2	≤ 13.5	≤ 16.5	≤ 20.5
Loss uniformity	dB	≤ 0.4	≤ 0.6	≤ 0.8	≤ 1.2	≤ 1.5	≤ 2.0
PDL – Polarization dependent loss	dB	≤ 0.2	≤ 0.2	≤ 0.2	≤ 0.25	≤ 0.3	≤ 0.4
Return loss	dB	≥ 55					
Directivity	dB	≥ 55					
Temperature stability -40 ~ +85 °C	dB	≤ 0.5					
Wavelength dependent loss	dB	≤ 0.5	≤ 0.5	≤ 0.5	≤ 0.8	≤ 0.8	≤ 1.0
Package dimension (l x w x h)	mm	100 x 80 x 10	100 x 80 x 10	100 x 80 x 10	100 x 105 x 18	100 x 105 x 18	100 x 105 x 18

Ratio	Unit	2 x 2	2 x 4	2 x 8	2 x 16	2 x 32	2 x 64
Operating wavelength	nm	1260 - 1650					
Insertion loss	dB	≤ 4.2	≤ 7.6	≤ 11.0	≤ 14.4	≤ 17.5	≤ 21.0
Loss uniformity	dB	≤ 0.9	≤ 1.1	≤ 1.2	≤ 1.5	≤ 1.8	≤ 2.2
PDL – Polarization dependent loss	dB	≤ 0.2	≤ 0.2	≤ 0.3	≤ 0.3	≤ 0.4	≤ 0.4
Return loss	dB	≥ 55					
Directivity	dB	≥ 55					
Temperature stability -40 ~ +85 °C	dB	≤ 0.5					
Wavelength dependent loss	dB	≤ 0.5	≤ 0.5	≤ 0.5	≤ 0.8	≤ 0.8	≤ 1.0
Package dimension (l x w x h)	mm	100 x 80 x 10	100 x 80 x 10	100 x 80 x 10	100 x 105 x 18	100 x 105 x 18	100 x 105 x 18

Note: Without connector type. In case of with connector, IL will be increased about 0.25 dB for each port.

561456 - Splitter shelf 3HU 19"

561911 - Patch-cord guide panel 1HU 19"

N.B.: For detailed information about the splitters please contact your TKF sales representative.

► Pigtails

Pigtails are optical fibre cords mostly consisting of a bare fibre with a secondary coating and terminated at one side by an optical connector. Due to its limited mechanical resistance pigtails are commonly used in a controlled environment, for example in a patch shelf or splice tray.

Description	
Cable type	Dry buffer "Easystrip"
Diameter (mm)	0.9
IL grade	IEC 61753 grade B, C
RL grade	IEC 61753 grade 1, 2
Connector type	LC/(A)PC, SC/(A)PC, E2000/APC, FC/(A)PC
Connector interface	IEC-61754
Colour	IEC 60304 / VDE 0888-3
Environmental class	U - Uncontrolled environment IEC 61753

► Patch-cords

Patch-cords are optical fibre cords with a connector on both sides. The fibre cord is a dry buffered optical fibre surrounded by reinforcement (aramid yarns) and an outer sheath. Both simplex, duplex and outdoor patch-cords are available.

Description	
Cable type	Simplex, duplex
Diameter (mm)	1.2, 1.6, 2.0
IL grade	IEC 61753 grade B, C
RL grade	IEC 61753 grade 1, 2
Connector type	LC/(A)PC, SC/(A)PC, E2000/APC, FC/(A)PC
Connector interface	IEC-61754
Colour	Yellow
Environmental class	U - Uncontrolled environment IEC 61753

► Adapters

Adapters are coupling and alignment components for 2 or more fibre optic connectors. The adapters are classified by type, configuration, coupling mechanism and style. In most cases the adapters are part of a patch shelf or termination box. The ACE adapters stand out due to the unique "one-piece" housing which guarantees a high quality and stable fibre optic connection. Different configurations are available, e.g. simplex, duplex, quad, with or without flange etc.

N.B.: For the different pigtail, patch-cord and adapter types please contact your TKF sales representative.

► Cable Assemblies

TKF offers a wide range of pre-connected cables, cables provided with any given optical connectors. Smart fan-out solutions together with a cunning packaging have been developed to achieve a product that allows a fast, reliable and convenient installation process.

Pre-connected fibre optic modules

Pre-connected cables

Pre-connected MDIC "Rapid roll"

Pre-connected DAC "Home run"

Pre-connected hybrid cable

Features and applications

- Homerun and Rapid roll solutions make fast and easy installation at the customer premises possible
- Connectors are mounted directly on the fibre without splicing
- Fan-out modules are equipped with 0.9 mm or 1.8 mm protective tubing
- Pre-connected SFU can be blown directly out of the packaging (blister)
- The cable assemblies can be combined with different ACE boxes or trays
- Individual retention of every tube in the Fan-out module guarantees a secure installation

N.B.: For detailed information about the cable assemblies please contact your TKF sales representative.

► House Entry Kit

The ACE house entry kit is suitable for above ground and buried applications on walls following DIN 18195-4. The set includes all components for both installation options.

Tubes and cables from 2 - 14 mm can be inserted. Maximum wall thickness up to 600 mm. The duct has a diameter of 20 mm, which requires a drilling of only 25 mm.

Gas-block connectors can be inserted in the housing.

Buried application

Above ground application

Features and applications

- Easy and fast installation
- Uniform solution above ground and buried
- Watertight following DIN 18195-4
- Suitable for duct and cable diameters 2 - 14 mm
- Gas-block connectors up to 14 mm can be inserted
- One kit for above ground and buried applications
- Small drillhole max. 25 mm
- Click lock with seal
- No additional tooling needed

ART. NUMBER	ACE CODE	DESCRIPTION
568930	MC-HE-01	House entry kit II including expansion resin

► Heat shrink Splice Protector

The heat shrink splice protector provides mechanical and environmental protection of fusion splices. The splice protector consists of a transparent shrinkable tube which contains meltable adhesive to encapsulate the splice. The stainless steel rod ensures a proper alignment and rigidity which protects the splice against mechanical damage and moisture.

Features and applications

- Shrinkable temperature of the sleeve approx. 115°C to 125°C
- Melting point of the adhesive approx. 75°C to 85°C
- Hardness of metal pin > 400VH
- Bellcore GR-1380 compliant
- RoHS compliant
- Full length strength member for total fibre support
- Close dimensional tolerances
- Fast shrink time

ART. NUMBER	ACE CODE	DESCRIPTION
401395	AC-SPH1	Heat shrink splice protector Ø 2.6 mm l:45 mm (100 pcs)
401396	AC-SPH4	Mini heat shrink splice protector Ø 1.0 mm l:30 mm (100 pcs)

► Crimp Splice Protector (ANT)

The unprotected splice is embedded in the durable plastic compound, thus protecting it from environmental impacts. The splice protection consists of a single-part V-shaped metal base coated on both sides with a durable plastic compound. The fibre-optic splice is mounted centrally in the splice protection after splicing and closed precisely by means of a splice protector press.

Features and applications

- Maximum diameter of primary coated fibre 250 µm
- Storage temperature -30°C to +60°C
- Processing temperature -5°C to +45°C

ART. NUMBER	ACE CODE	DESCRIPTION
401306	AC-SPA1	ANT splice protector (150 pcs)
401334	AC-TOSP	Splice protector press

► *Cleaner pen*

The ACE portfolio is enhanced with high performance tools to clean the ferrule end face of an optical connector. Two versions are available. Cleaner pen for ferrule end face Ø 1.25 mm and a cleaner pen for ferrule end face Ø 2.50 mm.

The cleaner pen allows an one-step cleaning action directly at the PC and APC ferrule as well as through an adapter.

ART. NUMBER	ACE CODE	DESCRIPTION
430160	AC-TOCP-125	Cleaner pen Ø 1.25 mm LC / MU adapter and connector
430161	AC-TOCP-250	Cleaner pen Ø 2.50 mm SC / FC / ST adapter and connector

► Support

The ACE concept is mainly a success of people. People with knowledge and skills concentrated in the ACE team. Together with our customers we share this technical knowledge and new developments.

Engineering

Already before the start of a project we offer our support in the engineering and decision making phase. Our engineers make use of software suitable for designing fibre optical networks based on your local circumstances even before you have taken one step in the field. Combined with a budgeted calculation the actual figures from the engineering will support you in making a rational and well-founded decision in building a network.

Based on the complete ACE cable and connectivity portfolio we are able to convert the engineering data directly into an existing, well-connected network which gives you the advantage of using first-hand information. This will not only support your own business case, but will also help you to convince investors, local governments etc.

Training

To prevent uncertainties or faulty installation we share our knowledge about cables and connectivity by offering training modules at project start.

By means of training the installer can get acquainted with the ACE cables, components and tools before starting in the field. This will help the installer in getting up to speed more easy which contributes to the often tight project planning, without losing grip on the quality. The different modules in the training course can be divided in Civil Works, Components, Fibre Optic and Cable Blowing.

Training 1 Civil Works

The civil works module is a theoretical training in laying and installation of cables, ducts, multi tube cables, connectors etc. Training subjects are: installation of ducts and cables using the right bend radii, how to make a correct tube connection, which tool to use etc.

Training 2 Components

In the components module both theoretical and practice training for installation of components and stripping of cables are covered. The training can be a general training concerning different ACE components or tailored made for specific projects or customers.

Training 3 Fibre Optic

The fibre optic module contains the following theoretical and practice subjects: basics of fibre optic, fibre splicing, OTDR / power measurement and interfero measurement in clean room environment. Based on customer requests and existing knowledge of the participants, training will take 1 to 3 days.

Training 4 Cable blowing

During this training TKF will share its long-term cable blowing experience with its participants. The module consists of cable blowing demonstrations and in depth multi-day training sessions.

Supply chain solutions & logistics

An essential part in the successful roll out of a project is the in time supply of the materials at the right location. The installer needs to be able to focus on his core business without concern regarding delivery of materials. TKF has implemented the TOC "Theory of Constraint" methodology for many years. TOC Replenishment in accordance with the engineering and forecast information from the customer is the key to a reliable supply chain.

Combined with the Logistical Services which TKF offers, we are capable to restock automatically according pre-arranged parameters in your warehouse or on project location. This VMI "Vendor Managed Inventory" concept will not only guarantee a constant stock level but will also reduce your operational costs due to lower stock levels, less communication and less transport between the customer warehouse and project location.

Field support

During the build of a fibre optic network it is important to keep in close contact with the project manager as well as the installers in the field. The extensive knowledge of our field support engineers combined with the skills of the installer will guarantee a successful roll out of the network.

Quality control & complaint monitoring

Within the TKF organisation there is a high quality standard for the production and handling of cables and components. When however there are issues which require extra attention the TKF quality department in combination with the field support engineers will always monitor and solve the complaints in close cooperation with the customer. This dedication within the entire TKF organisation has proven to be a solid base for satisfied customer relations over the last decades.

► *TKF Technological Leadership in connectivity solutions*

Since the establishment in 1930 TKF developed from a cable producer to a leading supplier of connectivity solutions located in the Netherlands. A broad range of cables, systems and services enables us to provide our customers worldwide with safe and reliable power and data connections.

Due to a focused commitment TKF is distinguished by specialized application knowledge and solutions with a high degree of reliability, quality and service. Specialized technical know-how and flexibility lead to a high return on investment for our customers.

TKF is characterized by continuous investment in customer relations, quality and supplementary services, resulting in sustainable cable solutions and long-term and successful relationships.

It goes without saying that we offer our customized solutions with respect for people and environment. Being part of the technology company TKH Group NV, TKF has access to breakthrough solutions, concepts and technologies.

More than 85 years of experience

► *Meet the TKH Group and its core technologies*

TKH Group NV (TKH) is an internationally operating group of companies specialized in creating and supplying innovative Telecom, Building and Industrial Solutions.

All TKH technologies are interlinked into total solutions for these three business segments. Specialists in the fields of marketing, process development, design, engineering and logistics add advice and project implementation to offer a tailor-made solution. TKH aims to carve out strong market positions based mainly on its own advanced technologies and services and on its strong regional and international positioning.

The group's growth is concentrated in north-western, central and eastern Europe and in Asia. TKH is known for its innovations and its commitment to renewal. The urge to lead is great. TKH places its experience and knowledge into the service of its clients, and jointly looks for optimal solutions.

The four TKH core technologies:

Vision & Security | Communications | Connectivity | Manufacturing Systems
